DETAILED ACTION

Response to Arguments

Applicant's arguments filed 2/27/04 have been fully considered but they are not persuasive.

The applicant argues that the prior art does not teach, "that motion detects trigger any actuator mechanism of an open panel of the vehicle." The examiner disagrees. The prior art teaches "a door controller for moving the door between open and closed positions." Where the door is the panel.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 16, 17, 19 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Flick (6,144,315).

As per claims 1 and 16, Flick teaches:

- a control system allowing the user to act remotely on a panel opening actuator mechanism secured to an openable panel of the vehicle (figures 2-6 and abstract);
- the control system comprising a means for controlling at least one action of the actuator mechanism, when a motion is remotely sensed by way of a motion sensor, along a favored axis of detection of motion of this

sensor and characterized in that this motion corresponds to a predetermined motion, the motor vehicle being a land vehicle (column 1, lines 23-30, column 4, lines 55-64 and column 9, lines 30-44).

As per claim 2, Flick discloses controlling at least one action of the actuator mechanism (column 4, lines 23-30), on the basis of the signals produced by motion sensors (column 1, lines 27-30), when a motion detected by way of these sensors along their respective favored axes is manifested as a specified motion along a resultant axis whose orientation is dependant on the achieved combination sensors (column 9, lines 30-44).

As per claim 17, Flick teaches sensing a location of the predetermined signal and causes the actuator to change a position of the panel (column 4, lines 48-67 and column 10, lines 21-35).

As per claim 19, Flick teaches the motion corresponding to a motion signal to the sensing system to cause the actuator to change position of the panel (column 4, lines 55-67 and figures 3 and 6).

As per claim 20, Flick teaches the control signal is generated without physical actuation of the control member so that there is hands free actuation of the control panel (column 4, lines 55-67).

Allowable Subject Matter

3. Claims 14 and 15 are allowed.
4. Claims 3-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
